

NEFA FS*

Diagnostic reagent for quantitative in vitro determination of non-esterified fatty acids (NEFA) in serum or plasma on DiaSys respons[®]910

Order Information

Cat. No. 1 5781 99 10 921
4 twin containers for 120 tests each

Method

Enzymatic endpoint method

Principle

Non-esterified fatty acids and coenzyme A react in the presence of acyl coenzyme A synthetase (ACS) to acylated coenzyme A. Acylated coenzyme A is oxidized by acyl coenzyme A oxidase under development of H₂O₂. H₂O₂ is converted to a coloured product by the use of Trinder substances in the presence of peroxidase (POD).

At 546 nm the intensity of the red dye is directly proportional to the concentration of free fatty acids in the sample.

Reagents

Components and Concentrations

| | | | |
|------------------|---------------------------|--------|-----------|
| R1: | Goods buffer | pH 7.0 | 50 mmol/L |
| | Coenzyme A | | 0.4 g/L |
| | ATP | | 2 mmol/L |
| | Acyl CoA synthetase (ACS) | | 0.4 kU/L |
| | MgCl ₂ | | 2 mmol/L |
| R2: | Goods buffer | pH 7.0 | 50 mmol/L |
| | Acyl CoA oxidase (ACOD) | | 30 kU/L |
| | Peroxidase (POD) | | 45 kU/L |
| Standard: | | | 1 mmol/L |

Storage Instructions and Reagent Stability

The reagents and the standard are stable up to the end of the indicated month of expiry, if stored at 2 – 8°C, protected from light and contamination is avoided. DiaSys respons containers provide protection from light. Do not freeze reagents!

Warnings and Precautions

- Reagent 1 and reagent 2: Danger. H318 Causes serious eye damage. P280 Wear protective gloves/protective clothing/eye protection. P305+P351+P338 If in eyes: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. P310 Immediately call a poison center/doctor.
- Standard: Warning. H319 Causes serious eye irritation. P280 Wear protective gloves/protective clothing/eye protection. P305+P351+P338 If in eyes: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. P337+P313 If eye irritation persists: Get medical advice/attention.
- In very rare cases, samples of patients with gammopathy might give falsified results [6].
- N-acetylcysteine (NAC), acetaminophen and metazolone medication leads to falsely low results in patient samples.
- Please refer to the safety data sheets and take the necessary precautions for the use of laboratory reagents. For diagnostic purposes, the results should always be assessed with the patient's medical history, clinical examinations and other findings.
- For professional use only!

Waste Management

Please refer to local legal requirements.

Reagent Preparation

The reagents are ready to use. The bottles are placed directly into the reagent trays.

Specimen [1,7]

Serum, heparin plasma or EDTA plasma (fasting > 12h)

Samples from patients under heparin therapy are unsuitable for analysis.

Effect the measurement immediately after blood collection because concentration of non-esterified fatty acids in serum increases due to lipolysis. Store samples at –20°C, if direct measurement is not possible. Discard contaminated specimens. Freeze only once.

Calibrators and Controls

For calibration, the DiaSys TruCal Lipid or DiaSys NEFA Standard FS is recommended. The assigned values of the calibrator or standard are traceable to a primary standard material. For internal quality control DiaSys TruLab L control should be assayed. Each laboratory should establish corrective action in case of deviations in control recovery.

| | Cat. No. | Kit size |
|------------------|------------------|----------|
| NEFA Standard FS | 1 5780 99 10 065 | 3 x 3 mL |
| TruCal Lipid | 1 3570 99 10 045 | 3 X 2 mL |
| TruLab L Level 1 | 5 9020 99 10 065 | 3 x 3 mL |
| TruLab L Level 2 | 5 9030 99 10 065 | 3 x 3 mL |

Performance Characteristics

| | |
|--|--------------------------------|
| Measuring range up to 3 mmol/L (84.7 mg/dL) NEFA (in case of higher concentrations re-measure samples after manual dilution with NaCl solution (9 g/L) or use rerun function). | |
| Limit of detection** | 0.02 mmol/L (0.565 mg/dL) NEFA |
| On-board stability | 21 days |
| Calibration stability | 7 days |

| Interfering substance | Interferences < 10% | NEFA [mmol/L] |
|--|---------------------|---------------|
| Ascorbate | up to 30 mg/dL | 0.910 |
| Hemoglobin | up to 120 mg/dL | 0.600 |
| | up to 180 mg/dL | 0.960 |
| Bilirubin, conjugated | up to 60 mg/dL | 0.620 |
| | up to 60 mg/dL | 1.28 |
| Bilirubin, unconjugated | up to 70 mg/dL | 0.550 |
| | up to 70 mg/dL | 0.930 |
| Lipemia (triglycerides) | up to 250 mg/dL | 0.540 |
| | up to 2000 mg/dL | 0.890 |
| For further information on interfering substances refer to Young DS [2]. | | |

Precision

| Within run (n=20) | Sample 1 | Sample 2 | Sample 3 |
|------------------------------|----------|----------|----------|
| Mean [mmol/L] | 0.31 | 0.62 | 0.94 |
| Coefficient of variation [%] | 1.68 | 1.95 | 1.27 |
| Between run (n=20) | Sample 1 | Sample 2 | Sample 3 |
| Mean [mmol/L] | 0.27 | 0.40 | 1.45 |
| Coefficient of variation [%] | 3.75 | 2.81 | 1.50 |

Method comparison (n=150)

| Test x | DiaSys NEFA FS (Hitachi 917) |
|----------------------------|---|
| Test y | DiaSys NEFA FS (respons [®] 910) |
| Slope | 1.00 |
| Intercept | 0.00 mmol/L |
| Coefficient of correlation | 0.999 |

** according to NCCLS document EP17-A, vol. 24, no. 34

Conversion factor

Non-esterified fatty acids [mg/dL] x 0.0354 =

Non-esterified fatty acids [mmol/L]

Reference Range [3]

Women: 0.1 – 0.45 mmol/L (2.8 – 12.7 mg/dL)

Men: 0.1 – 0.60 mmol/L (2.8 – 16.9 mg/dL)

Plasma concentrations of non-esterified fatty acids are subject to individual fluctuations and in particular increased after food intake.

Each laboratory should check if the reference ranges are transferable to its own patient population and determine own reference ranges if necessary. For diagnostic purposes NEFA values should always be assessed in conjunction with the anamnesis, the clinical examination and other findings.

NEFA FS

Application for serum and plasma samples

This application was set up and evaluated by DiaSys. It is based on the standard equipment at that time and does not apply to any equipment modifications undertaken by unqualified personnel.

| Identification | |
