**Summary** [1,2]

Albumin is an important binding and transport protein for various substances in plasma and the main contributor to the plasma osmotic pressure. Measurement of albumin in serum is used for diagnosis and monitoring of liver diseases, e.g. liver cirrhosis. Furthermore, albumin levels indicate the health and nutritional status of an individual and, therefore, are used for detecting malnutrition and for prognosis in elderly hospitalized patients.

**Method**

Photometric test using bromocresol green

**Principle**

In the presence of bromocresol green at a slightly acid pH, serum albumin produces a color change of the indicator from yellow-green to green-blue.

**Reagents**

Components and Concentrations

| Citrate buffer pH 4.2 | 30 mmol/L |
| Bromocresol green | 0.26 mmol/L |
| Standard | 5 g/dL |

Contains bovine serum albumin (5 – 10%)  

**Storage Instructions and Reagent Stability**

The reagent and the standard are stable up to the end of the indicated month of expiry, if stored at 2 – 25°C and contamination is avoided. Do not freeze the reagents and the standard and protect them from light!

**Warnings and Precautions**

1. The standard contains animal material. Handle the product as potentially infectious according to universal precautions and good clinical laboratory practices.
2. In very rare cases, samples of patients with gammopathy might give falsified results [6].
3. Please refer to the safety data sheet and take the necessary precautions for the use of laboratory reagents. For diagnostic purposes, the results should always be assessed with the patient’s medical history, clinical examinations and other findings.
4. For professional use only!

**Waste Management**

Please refer to local legal requirements.

**Reagent Preparation**

The reagent and the standard are ready to use.

**Materials required but not provided**

- NaCl solution 9 g/L
- General laboratory equipment

**Specimen**

- Serum, heparin plasma or EDTA plasma

**Stability** [3]:

- 10 weeks at 20 – 25°C
- 5 months at 4 – 8°C
- 3 months at –20°C

Only freeze once!  
Discard contaminated specimens!

**Assay Procedure**

**Application sheets for automated systems are available on request.**

**Wavelength** Hg 546 nm, 540 – 600 nm

**Optical path** 1 cm

**Temperature** 20 – 25°C/37°C

**Measurement** Against reagent blank

<table>
<thead>
<tr>
<th>Sample or standard</th>
<th>Blank</th>
<th>Sample or standard</th>
<th>10 µL</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dist. Water</td>
<td>10 µL</td>
<td>1000 µL</td>
<td>1000 µL</td>
</tr>
</tbody>
</table>

Mix, incubate for approx. 10 min. and read the absorbance against reagent blank within 60 min.

**Calculation**

With standard or calibrator

Albumin [g/dL] = \( \frac{A_{Sample}}{A_{Std}} \times \frac{Conc. Std}{Cal [g/dL]} \)

**Conversion factor**

Albumin [g/dL] x 144.9 = Albumin [µmol/L]

**Calibrators and Controls**

For the calibration of automated photometric systems the DiaSys TruCal U calibrator is recommended. The assigned values of TruCal U have been made traceable to the reference material ERM-DA470. For internal quality control DiaSys TruLab N and P controls should be assayed. Each laboratory should establish corrective action in case of deviations in control recovery.

Performance Characteristics

Measuring Range
The test has been developed to determine albumin concentrations within a measuring range from 0.2 – 6 g/dL. When values exceed this range samples should be diluted 1 + 1 with NaCl solution (9 g/L) and the result multiplied by 2.

Specificity/Interferences
No interference was observed by ascorbic acid up to 30 mg/dL, bilirubin up to 40 mg/dL, hemoglobin up to 400 mg/dL and lipemia up to 500 mg/dL triglycerides. For further information on interfering substances refer to Young DS [5].

Sensitivity/Limit of Detection
The lower limit of detection is 0.2 g/dL.

Precision (at 25°C)

Method Comparison
A comparison of DiaSys Albumin FS (y) with a commercially available assay (x) using 59 samples gave following results:

\[ y = 1.00 \times 0.11 \text{ g/dL}; \ r = 0.998 \]

Reference Range [4]
Adults: 3.5 – 5.2 g/dL
35 – 52 g/L
507 – 756 µmol/L
Each laboratory should check if the reference ranges are transferable to its own patient population and determine own reference ranges if necessary.
