TruLab HbA1c Assayed quality control material for monitoring assay performance of quantitative in vitro determination of hemoglobin A1c (HbA1c)

Order Information
5 9940 99 10 076 Level 2 6 x 1 mL

Description
TruLab HbA1c net is a lyophilized control based on human blood material (erythrocytes). The HbA1c concentration in TruLab HbA1c net Level 2 is pathological.

Stability
Unopened: Until the end of the indicated month of expiry, stored at 2 – 8°C

Reconstituted:

| Stability           | 3 months| 28 days   | 2 days

*Freeze only once!

Proper storage and handling of this product must be observed. Protect the control from light. Avoid contamination and evaporation.

Warnings and Precautions
1. Each individual blood donation used for production of TruLab HbA1c net was found to be non-reactive when tested with approved methods for HBsAg, anti-HIV 1+2 and anti-HCV. As there is no possibility to exclude definitely that products derived from human blood transmit infectious agents, it is recommended to handle the control with the same precautions used for patient specimens.
2. Please refer to the safety data sheets and take the necessary precautions for use of calibrators and controls.
3. For professional use only!

Preparation
The lyophilisate is vacuum sealed; therefore, the vial should be opened very carefully to avoid loss of dried material. For reconstitution add exactly 1 mL of distilled water. Close the vial carefully and allow the control to stand for 10 minutes at room temperature. Then, for further 20 minutes homogenize the control by swirling occasionally. Avoid foaming! Do not shake! Controls must be treated the same way as patient samples. Please refer to section “sample preparation” in the package insert of the reagent. The use of DiaSys HbA1c net Hemolyzing Solution product code 1 4590… is required.

Target Values
The assay values were determined using DiaSys reagents HbA1c net FS, calibrated by DiaSys TruCal HbA1c net. Control values according to DCCT/NGSP and according to IFCC have been calculated from IFCC values [1 – 4]. The assay values listed below are specific for this lot number of control only.

Procedure
Please refer to the reagent package insert for instructions for use.
