respons®910

Immunoglobulin G FS*

Order Information

Cat. No.	Kit size
1 7212 99 10 921	Σ 320 (4 x 80)

Intended Use

Diagnostic reagent for quantitative in vitro determination of immunoglobulin G (IgG) in human serum or heparin plasma on automated respons®910.

Summary

The human immunoglobulin classes (IgG, IgA, IgM, IgE and IgD) are a group of functionally and structurally closely related glycoproteins. Human IgG has a molecular weight of about 150 000 dalton and consists of two identical heavy chains and two identical light chains connected by disulfide bonds in a characteristic Y-shaped form [1]. Serum IgG or IgG is produced by plasma cells (B-cells) and represents about 75% of all soluble immunoglobulin classes [2]. The main functions of IgG are binding of antigens, initiating complement activation and triggering further catabolism of the antigen [1]. Decreased IgG concentrations occur in primary as well as in secondary immunodeficiency syndromes. Increased loss of proteins due to nephrotic syndrome may result in a decreased IgG concentration [1]. A high increase of one immunoglobulin class deriving from multiple myeloma might lead to a decrease in other immunoglobulin classes like IgG. Increased IgG concentrations occur in severe infections and autoimmune diseases [1,2]. Many forms of myeloma produce high amounts of monoclonal or polyclonal IgG. Quantitative IgG determination is important for differential diagnosis of these diseases. All methods for IgG quantitation are calibrated for polyclonal IgG. The quantitation of monoclonal IgG is not standardized and values may differ for different reagents and methods. Values should only be used for follow up studies. Monoclonal immunoglobulinemia requires detailed differential diagnostic investigation in addition to the quantitative determination [1].

Method

Immunoturbidimetric test

Determination of IgG concentration by photometric measurement of antigen antibody reaction of antibodies to human IgG with IgG present in the sample.

Reagents

Components and Concentrations

R1:	TRIS	pH 7.5	100 mmol/L
	NaCl		150 mmol/L
R2:	TRIS	pH 8.0	100 mmol/L
	NaCl		300 mmol/L
	Anti-human IgG antibody (goat)		< 1 %

Storage and Stability

Reagents are stable up to the date of expiry indicated on the kit, if stored at 2 – 8°C and contamination is avoided. Do not freeze and protect from light.

The open-vial stability of the reagent is 18 months until expiry date.

Warnings and Precautions

1. The reagents contain sodium azide (0.95 g/L) as preservative. Do not swallow! Avoid contact with skin and mucous membranes.
2. Reagent 2 contains material of biological origin. Handle the product as potentially infectious according to universal precautions and good clinical laboratory practice.
3. In very rare cases, samples of patients with gammopathy might give falsified results [3].
4. In case of product malfunction or altered appearance that could affect the performance, contact the manufacturer.
5. Any serious incident related to the product must be reported to the manufacturer and the competent authority of the Member State where the user and/or patient is located.
6. Please refer to the safety data sheets (SDS) and take the necessary precautions for the use of laboratory reagents. For diagnostic purposes, the results should always be assessed with the patient's medical history, clinical examinations and other findings.
7. For professional use only.

Waste Management

Refer to local legal requirements for chemical disposal regulations as stated in the relevant SDS to determine the safe disposal.

Warning: Handle waste as potentially biohazardous material. Dispose of waste according to accepted laboratory instructions and procedures.

Reagent Preparation

The reagents are ready to use. The bottles are placed directly into the reagent rotor.

Materials Required

General laboratory equipment

Specimen

Human serum or heparin plasma

Only use suitable tubes or collection containers for specimen collection and preparation.

When using primary tubes, follow the manufacturer's instructions.

Stability [4]:

4 months	at	20 – 25°C
8 months	at	4 – 8°C
8 months	at	-20°C

Only freeze once. Discard contaminated specimens.

Calibrators and Controls

DiaSys TruCal Protein is recommended for calibration. Calibrator values have been made traceable to the reference material ERM®-DA470k/IFCC. Use DiaSys TruLab Protein Level 1 and Level 2 for internal quality control. Quality control must be performed after calibration. Control intervals and limits have to be adapted to the individual requirements of each laboratory. Results must be within the defined ranges. Follow the relevant legal requirements and guidelines. Each laboratory should establish corrective action in case of deviations in control recovery.

	Cat. No.	Kit size
TruCal Protein	5 9200 99 10 039	5 x 1 mL
TruLab Protein Level 1	5 9500 99 10 046	3 x 1 mL
TruLab Protein Level 2	5 9510 99 10 046	3 x 1 mL

Performance Characteristics

Measuring range from 5.3 mg/dL up to 3200 mg/dL, depending on the concentration of the highest calibrator. Linearity is given within ± 10%. In case of higher concentrations re-measure samples after manual dilution with NaCl solution (9 g/L) or use rerun function.	
Limit of detection**	5.3 mg/dL
Limit of quantitation**	5.3 mg/dL
No prozone effect up to 8000 mg/dL.	
Onboard stability	28 days
Calibration stability	10 days

Interference by	**Interferences ≤ 10% up to**	**Analyte concentration [mg/dL]**
Bilirubin (conjugated)	60 mg/dL	409
	60 mg/dL	2056
Bilirubin (unconjugated)	60 mg/dL	415
	60 mg/dL	2156
Hemolysis	600 mg/dL	372
	1200 mg/dL	2040
Lipemia (triglycerides)	2000 mg/dL	392
	2000 mg/dL	1974
For further information on interfering substances, refer to the literature [5-7].

** according to CLSI document EP17-A, Vol. 24, No. 34

Conversion Factor
Immunoglobulin G [mg/dL] x 0.067 = Immunoglobulin G [µmol/L]

Reference Range [1]

	[mg/dL]	[µmol/L]
Adults	700 – 1600	46.9 – 107
Children		
Newborns	660 – 1750	44.2 – 117
1 month	390 – 1050	26.1 – 70.4
2 months	250 – 680	16.8 – 46.6
3 months	200 – 550	13.4 – 36.9
4 months	200 – 540	13.4 – 36.2
5 months	220 – 600	14.7 – 40.2
6 months	260 – 490	17.4 – 32.8
7 months	290 – 770	19.4 – 51.6
8 months	320 – 840	21.4 – 56.3
9 months	330 – 880	22.1 – 59.0
10 months	350 – 910	23.5 – 61.0
11 months	350 – 930	23.5 – 62.3
12 months	360 – 950	24.1 – 63.7
2 years	470 – 1230	31.5 – 82.4
4 years	540 – 1340	36.2 – 89.8
6 years	590 – 1430	39.5 – 95.8
8 years	630 – 1500	42.2 – 101
10 years	670 – 1530	44.9 – 103
12 years	700 – 1550	46.9 – 104
14 years	710 – 1560	47.6 – 105
16 years	720 – 1560	48.2 – 105
18 years	730 – 1550	48.9 – 104

Each laboratory should check if the reference ranges are transferable to its own patient population and determine own reference ranges if necessary.

Immunoglobulin G FS

Application for serum and plasma samples

This application was set up and evaluated by DiaSys. It is based on the standard equipment at that time and does not apply to any equipment modifications undertaken by unqualified personnel.

Identification	
This method is usable for analysis:	Yes
Twin reaction:	No
Name:	IGG
Shortcut:	
Reagent barcode reference:	715
Host reference:	715

Technic	
Type:	End point
First reagent:[µL]	200
Blank reagent	Yes
Sensitive to light	
Second reagent:[µL]	40
Blank reagent	No
Sensitive to light	
Main wavelength:[nm]	570
Secondary wavelength:[nm]	
Polychromatic factor:	
1 st reading time [min:sec]	(04:24)
Last reading time [min:sec]	06:00
Reaction way:	Increasing
Linear Kinetics Substrate depletion: Absorbance limit	
Linearity: Maximum deviation [%]	
Fixed Time Kinetics Substrate depletion: Absorbance limit	
Endpoint Stability: Largest remaining slope	
Prozone Limit [%]
